### SPACE FOR GOOD

Viasat powers some of the world's most important communications solutions — on the ground, in the air, at sea, and in space. With 21 operational satellites in space, 7000+ employees, and 90 offices around the globe, we're on a mission to connect the world. Because, when everyone is connected, the possibilities are limitless.

Together with space agencies and organisations globally, we are working on solutions for secure satellite communication, that bring a safer and more resilient society.

### AIRSPACE MODERNIZATION

In the world of Aviation, the Iris air traffic management program - an initiative led by the European Space Agency (ESA) and Viasat - uses Viasat satellite technology to help modernize air traffic management (ATM) by increasing the capacity of critical communications, enabling airspace optimization, easing congestion, and reducing delays and emissions for airlines.

Iris can support full 4D trajectory management over airspaces across the globe and the data link offers a modern, IP-based, complementary communication between controllers and cockpit crews. Iris connectivity can help accelerate

digitalisation of air traffic management and aviation operations.

### NEW AIRSPACE USES

As airspace continues to evolve, new use cases, like that of using drones in lower airspace, and increasing use of upper airspace by high altitude pseudo satellites and rockets, will continue to develop. With breakthrough solutions being developed every year, and Viasat working with regulators to build a space for these operations in our day-to-day lives, the coming decades will be transformational.

Viasat is already supporting uncrewed aircraft to monitor remote infrastructure, capture vital climate data, carry out humanitarian relief and more. It's possible that we'll also soon be traveling through cities in autonomous flying taxis, getting our groceries delivered to our door by drones, and enjoying space tourism.

Whatever the future holds, Viasat can help connect you to the future.

**Are you interested in supporting Iris in your region?** Get in touch to learn more about the programme's transformational benefits.
